

OPTiM AI Camera and Genetec Security Center Collaboration
Connecting with the world's No. 1 company of video management systems
Promoting large-scale introduction for OPTiM's AI pre-trained models

OPTiM Corporation (OPTiM), a market leader in AI, IoT and big data platforms, has signed an SDK license agreement with Genetec Inc. (Genetec; headquartered in Montreal, Quebec, Canada, President and CEO: Pierre Lars), the world's No. 1**1 company of video management systems (VMS). OPTiM has verified the connection between the VMS service Omnicast of Genetec Security Center, Genetec's comprehensive security platform, and OPTiM AI Camera, an AI-based image analysis solution.

As a result, Genetec's existing "Omnicast" customers, including large facilities with even tens of thousands of surveillance cameras, will immediately have access to the more than 300 pre-trained AI models for eleven industries provided by OPTiM AI Camera.

Based on this agreement, Genetec Security Center and OPTiM AI Camera will work together to create even more value for customers not only in Japan and other Asian countries, but also all over the world, including the U.S. and Europe.

■ About Genetec's product services

Genetec will develop and market for both Omnicast, which has been on the market for more than 20 years, and Genetec Security Center, an integrated physical security platform that will be aggressively marketed in the future.

- **Omnicast**
Omnicast is an advanced VMS that combines a well-designed, easy-to-use graphical user interface with the redundancy, load balancing, and authentication features required for stable operation of large facilities.
When run on Windows[®] or Windows Server[®], footage from up to 300 cameras can be recorded on a single server, allowing unlimited cameras and monitoring devices to be managed and operated as a single system on multiple recording servers, making it an ideal solution for large facilities.
- **Genetec Security Center**
A unified physical security suite that integrates entry and exit management, vehicle license number recognition, and more into one platform, while incorporating the functions of Omnicast VMS with sales records. With this integration, it is possible to seamlessly operate surveillance by cameras, access control, and security by recognizing vehicle license plate numbers.

■ About OPTiM AI Camera

OPTiM AI Camera is a package service that supports marketing, security, operational efficiency, and more in any industry by collecting data from various types of cameras and analyzing the images by using pre-trained AI models. OPTiM AI Camera is equipped with a menu that applies over 300 AI pre-trained models for 11 industries, including medical, retail, and railways, making it possible to launch services that can be executed at a lower cost.
